PORTFOLIO SCOPE

Content, community, commercial production and an independent product project. Evidence and scope labels appear throughout.

Qinghe Zaiye

Photography education and social content across Douyin and Xiaohongshu

I independently operate Qinghe Zaiye, turning recurring audience questions into practical photography tutorials. I handle topic planning, shooting, editing, copy, packaging, publishing and performance review.

Audience questions, comments and content signals inform what I explain or test next.

Brand Collaborations

Independent, fast-turnaround and on-location content production

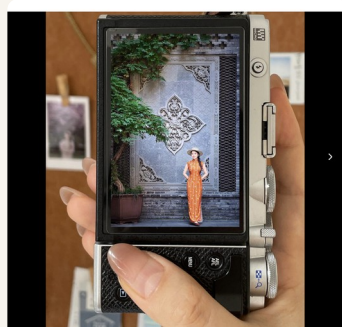

Across multiple creator-side collaborations through Qinghe Zaiye, I translate briefs into platform-native content under real-world time and location constraints. I develop the angle and visual approach, shoot, edit, write the copy, assemble the deliverable, and publish or deliver it independently.

Fast-turnaround, independent production is a recurring working pattern across my creator-side collaborations.

PRIMARY EXAMPLE · HOSPITALITY

All Seasons Hotel

Creator-side Xiaohongshu Pugongying collaboration. I developed and produced the post from concept to publication. On location, I communicated with hotel and breakfast-service staff when cooperation was needed to capture intended scenes.

Lens Notes

Turning fragmented photography references into a product experience

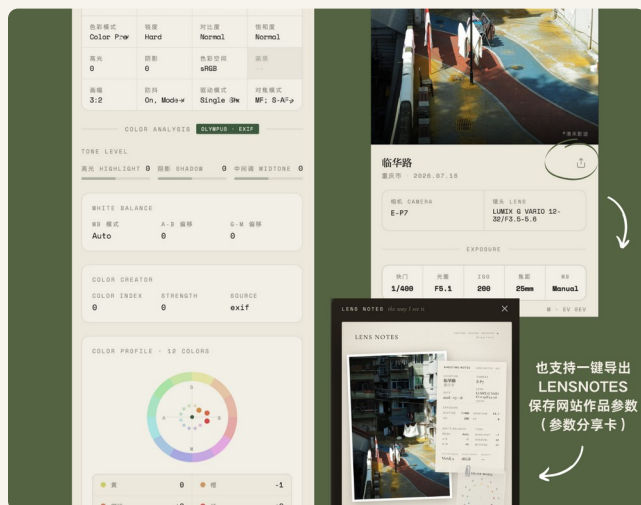

Useful photography references are often fragmented: a compelling image, its setting, equipment and shooting parameters live in different places. I initiated Lens Notes to connect those pieces in a browsable photography reference experience.

WHAT I OWNED

Problem definition
Requirements and feature direction
Information architecture and interface decisions
AI-assisted development workflow
Implementation review, verification and release decisions

CORE PRODUCT FLOWS

Browse references by place, equipment and shooting context. View image-level details. Upload an Olympus / OM System JPG to read EXIF and generate a shareable parameter card.

Lens Notes is an independently initiated and built product project.

Lens Notes

Launch, community feedback and product signals

After launching Lens Notes, I created beta-recruitment materials for Olympus / OM System users and opened a product community for feedback. I use community input, polls, reported issues and observed product behaviour to prioritise iterations and make release decisions.
